

# Temporomandibular Joint

Your jaw joint, or **temporomandibular joint (TMJ)** gets its name from the two bones which form the joint. The temporal bone of your skull and the mandible or jaw bone fit together to form a hinge-like joint. **TMJ** can cause headaches, ringing in your ear, face pain, and pain across your neck and shoulders. Popping and clicking of the **TMJ** while opening your mouth or chewing indicates that your **TMJ** is not functioning properly. When an imbalance of the **TMJ** is found, it can be corrected by balancing the jaw's muscular activity with Chiropractic.

Our mission is to help people. We can't reach everyone to tell them that Chiropractic may be the answer to their problem. Please give this certificate to someone who we can help. We will offer our honest and sincere assistance.
